

Captive Reef Systems

provides the following services:

- * Marine/Freshwater aquarium consultation and design;

- * In-home or office installation; and

- * A service program ranging from ongoing, routine maintenance to 24-hour emergency service.

All aimed at providing every customer with a unique salt water environment - made up of livestock, corals and life support systems that interact and complement one another. We're committed to providing our customers with a level of excellence unsurpassed in the aquarium industry.

"Setup properly and basically left alone - other than for routine maintenance, saltwater aquariums can be simple, beautiful and profoundly satisfying."

Robert Fenner

The Conscientious Marine Aquarist

Today, many people consider their marine aquariums to be "little slices of the ocean."

Captive Reef Systems will provide that environment so you're able to enjoy the psychological, social, emotional, education and physical benefits of marine aquarium keeping.

Did you know that the Chinese, in their practice of *feng shui*, believe an aquarium placed well in a home or business, will bring luck, wealth and harmony?

Captive Reef Systems

We're available, 7 days a week, at:

We Design and Install Marine Aquariums to meet your needs and be sustainable

Concerned that a saltwater environment may be too difficult? We've found that marine aquariums are no more difficult than freshwater - as long as there is proper setup and responsible maintenance. We will work with you to evaluate your physical environment and aquarium preferences to design a marine aquarium that is your "slice of the ocean".

Once you determine the marine aquarium environment you prefer, we'll design and install your marine environment including:

- * An aquarium
 - * Stand
 - * Canopy
- * Temperature control
- * Lighting
- * Circulation and Filtration
- * Substrate and Aquascape
 - * Saltwater
- * Fish and invertebrates

A marine aquarium can contain fish, corals, live sand and live rock. When you look into a marine aquarium, you're able to see a complete ecological system at work.

There are 3 basic categories:

- * **Fish only** - just like it sounds, an aquarium with just fish - frequently the most exotic and beautiful; typically also includes sand and decorative rock.
- * **Fish only with live rock** - an introduction to the reef environment as rock with living creatures (sponges, tube worms, etc.) is added
- * **Coral Reef** - there are few human works of art that can compare with the shapes, colors and patterns of the corals, fishes and invertebrates - all mixing and moving in the currents within a reef tank.

Some people refer to a marine aquarium as a form of living art -- and great fun, too.

Scheduled Maintenance at your Convenience

Our maintenance program is designed to provide all that is necessary to maintain a healthy, viable and exciting aquatic environment. Each visit is scheduled and typically includes:

- * Water Quality evaluation
 - * Livestock evaluation
- * Equipment test, cleaning and adjustments
 - * Change or clean filter
 - * Water changes
- * Clean interior of aquarium
 - * Clean and polish exterior
- * Add vitamins and trace element supplements
- * Feeding of live food (if appropriate)

Livestock is available, as well. Livestock are selected for beauty and compatibility with your environment.
